

Hood Exhaust Filter

Restaurants and other commercial kitchens exhaust the grease, smoke and other harmful contaminants. For a variety of reasons there may be a desire to filter this exhaust before it is allowed to contaminate the outdoor air. There are in-duct solutions that can be installed in between the hood and the exhaust fan that will filter this exhaust and remove the contaminant from the air stream before it is exhausted.

prefilter

dehumidifier

Bag Filter

Geometric dimensions, material and quality of prefilter, dehumidifier, bagfilter elements are determined by fluid temperature, moisture, fluid flow, pollutant concentration and physical and chemical properties of the fluid.
